PROFILE

Backend developer specialising in artificial intelligence. Designing backend systems and integrating AI into production (RAG, LLMs, vector databases), first inside a software vendor, then independently for clients. Comfortable owning the full lifecycle: design, development, deployment and maintenance.

PROFESSIONAL EXPERIENCE

Backend & AI Developer, freelance 2026 –

- In partnership with SY Solutions, Lyon · Fixed-scope client engagements
- Backend development and AI integration on client engagements (Python, FastAPI, REST APIs).
 - Identifying and qualifying prospective clients among early-stage startups and French innovation incubators.

Backend & AI Developer 2022 – 2025

- Go2cam International, Lyon · CAD/CAM software vendor
- Designed and deployed a RAG system for internal documentation search, cutting research time by approximately 50%.
 - Integrated and exposed an in-house LLM through REST APIs consumed by business tools.
 - Built and operated vector databases (Qdrant, ChromaDB, PostgreSQL + pgvector).
 - Developed predictive machine learning models (Random Forest, XGBoost) for demand forecasting, reaching up to 87% accuracy on the test set.
 - Cleaned and migrated three production databases fed since 2008, several million records, surfaced through dashboards: page loads brought back from over ten seconds to normal response times.
 - Automated and optimised data and AI pipelines.
 - Developed a user-facing support chatbot.
 - Rebuilt and extended the internal portal with Django (authentication, workflows, REST APIs).
 - Deployed and maintained services in production, working alongside the technical teams.

PERSONAL PROJECT

jobsearch-platform: job search platform Public repository · 2026

- github.com/saleh-td/jobsearch-platform
- Automatic aggregation of three job sources: EURES, Adzuna and Himalayas.
 - Relevance scoring by a locally hosted LLM (Qwen 2.5 7B via Ollama, on GPU): no inference cost, no rate limits.
 - Vue 3 interface for browsing results.
 - Full architecture orchestrated with Docker Compose, reproducible from one machine to the next.

TECHNICAL SKILLS

AI & machine learning	RAG, LLM integration and deployment, fine-tuning, embeddings, prompt engineering, machine learning (classification, regression), deep learning
ML frameworks	PyTorch, TensorFlow, scikit-learn, XGBoost
Backend & data	Python, FastAPI, Django REST, Pandas, NumPy, REST APIs, PostgreSQL, MongoDB, SQL
Vector databases	pgvector, Qdrant, ChromaDB
DevOps & MLOps	Docker, Kubernetes, MLflow, Airflow, Git, GitHub, CI/CD, unit testing, n8n, Ollama
Frontend	JavaScript, React, Vue 3, Next.js, HTML, CSS
Languages	French (native), English (B2)

EDUCATION

Bachelor's Degree: Application Design and Development

Afip Formation, Villeurbanne, France · 2023 – 2025 · Specialisation in data science and algorithms · Three-year post-secondary degree, RNCP Level 6

Diploma in Mathematics and Computer Science

IUT La Doua, Villeurbanne, France · 2022 – 2023
